## Education

### Shah & Anchor Kutchhi Engineering College (SAKEC)

2024 – 2028

B.TECH Computer Engineering | CGPA: 8.25 / 10

Mumbai, India

- **Relevant Coursework:** Web Technologies, Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS

## Technical Skills

**Open Source & GitHub Workflow:** Issue Triage, Pull Requests, Code Review, Maintainer Collaboration, CI via GitHub Actions

**Frontend:** HTML5, CSS3, JavaScript (ES6+), React, Next.js 14, Responsive/Cross-browser Layouts, GSAP & ScrollTrigger Animations

**Design & UX:** Typography, Color/Contrast Systems, Component-based Styling, Accessibility-aware Layouts, SEO Optimization

**Documentation & Static Sites:** GitHub Pages, Markdown, Static Site Structuring, Content Migration, Content Unification

**Systems:** Linux CLI, Docker, Git

**Other:** Python, Node.js, REST APIs, RSS/Feed Parsing, Performance Optimization

## Open Source & Community Contributions

### SWC / GCNU Neuroinformatics Unit | Contributor – Python, GitHub

Ongoing

- Contributed to the organization's public website and documentation, fixing formatting and content issues – direct prior experience maintaining an open-source project's public-facing site, using Docker for local development.
- Opened pull requests against Python-based neuroscience tooling, resolved open issues, and went through standard maintainer code review before merge.

### Kaizen-ml | Founder & Maintainer – GitHub Organization

Ongoing

- Maintain 5 public repositories – triaging issues, reviewing pull requests, and writing documentation for an open-source AI/agentic-systems org, working through the open-issue backlog end to end.

## Projects

### Girnari Export – Company Website

Personal Project

Vanilla HTML/CSS/JS, GSAP, ScrollTrigger, GitHub Pages

- Rebuilt a full multi-page static site end to end, replacing low-contrast text and inconsistent typography with a consistent design system, and restructuring broken/misaligned layout sections across every page.
- Found and fixed broken links and stale placeholder content sitewide; rewrote inaccurate product-sourcing and certification copy after auditing it against the client's actual claims.
- Built a radial FAB navigation menu and pinned lateral-scroll sections with GSAP/ScrollTrigger, and shipped a redesigned footer, certifications page, and individual product pages.

### Bharat Monitor – India News Intelligence Dashboard

Personal Project

Next.js 14, TypeScript, Vercel, RSS Aggregation

- Built and shipped new pages for an aggregation platform pulling from 30+ RSS feeds, including handling feed-parsing edge cases and reliability issues – the same category of RSS problems this role's bug backlog covers.
- Designed an interactive district-level map view and architected the whole project to run on free-tier infrastructure (Vercel, Upstash).

## Certifications & Competitions

- **HackPrix 2026** – Sustainable Development Track
- **Smart India Hackathon 2024** – Round 1
- **Full-Stack Web Dev Bootcamp** – Udemy, Jan 2026
- **Kestra Fundamentals** – May 2026
